

REMOTE DEVICE MANAGEMENT (RDM)

Remote Device Management (RDM) enables customers to manage and control their ID TECH devices from any internet connected host system. Stay on top of your entire estate of ID TECH devices by monitoring device activity, status, and many other device parameters via the RDM dashboard and exception alerts.

RDM adds value to both attended and unattended payment environments, but really shines in unattended environments where there are no personnel watching over the devices. It also supports remote updates and maintenance, saving unnecessary service calls and unplanned kiosk downtime. RDM's data integration capabilities allows you to enhance your existing IT investments with seamless connectivity to ensure that everything works together.

FEATURES
