

Transit system integrators need a seamless, scalable payment ecosystem embedded across every mode of public transportation. **ID TECH delivers a complete transit-focused payment portfolio, supporting bus validators, inspection devices, ticket vending machines, and gates and turnstiles** so cities and municipalities can deploy secure, unified payment acceptance across their entire network.

**LARGEST ACCEPTANCE OF GLOBAL TRANSIT CARD TYPES & MEDIA**

- Support of both Open Loop & Closed Loop Contactless transit cards and media:
  - Open Loop:** Card transit specific kernel implementations and certifications where supported by Brand, Visa, Interac, JCB, and UPI; Apple Express Transit/ECP 2.0
  - Closed Loop:** FeliCa certification and acceptance of FeliCa based cards; MiFare support (E-Purse, Desfire); Calypso
- QR Code** reading support through integrated camera with optimized decoding

**UNRIVALED CONTACTLESS READING PERFORMANCE**

- Ultra fast contactless reading speed optimized for transit applications and seamless customer experience
- Specialized tuning to optimize contactless card detection and reading
- Refined collision detection and payment logic management

**TARGETED TRANSIT PAYMENT FUNCTIONALITY**

- Hash Pan output for deny list implementation, fare aggregation, and refunds  
-Implementation of standard and custom hash outputs
- EMV Level 3 payment certification with global acquirers for transit level payment transactions
- ODA support for seamless transit experience

**ROBUST PAYMENT HARDWARE**

- Ultra compact contactless readers for easy integration and powerful contactless performance
- Rigorous vibration testing for durability on moving vehicles (meets E-Mark certifications)
- Extreme IP65 testing with extended temperature designed to withstand tough transit environments
- High decibel beeper for user engagement and interaction
- SAM slots for additional security
